

Before the Ip configurations

The screenshot shows a QEMU (Win) window. On the left, a network diagram illustrates a host with IP 50.0.0.10 connected to a virtual machine (Win) with IP 60.0.0.10. The host is connected to a 'Net' device, which is then connected to the VM. On the right, a Windows XP desktop is visible. A command prompt window is open, displaying the output of the 'route print' command. The output shows the active routes for the network interface 'e0'.
